

Luis A. Radillo

Avionics Technician | Entry-Level IT Candidate

Vallejo, CA | (707) 654-5707 | Luisradillojr03@gmail.com | www.linkedin.com/in/luis-a-radillo

Security Clearance: Secret - Active

For the last four years, I’ve worked as an Avionics Technician in the Air Force, diagnosing and troubleshooting complex electronic systems at the component level. I’m now shifting my focus to the IT field, bringing with me a strong understanding of hardware, logical problem-solving, and technical documentation. I look forward to combining my hardware background with ongoing technical certifications to build a long-term career in the IT field

Key Skills

Network Security Fundamentals	Hardware & Software Troubleshooting	Linux & Splunk (Basic)
Technical Documentation	Technical Training & Mentoring	AI Fundamentals

Professional Experience

United States Air Force – Avionics Test Station and Components Journeyman

Charleston, SC | Dec, 2022 – Present (Projected Separation: Dec, 2026)

- Diagnosed and repaired over 50+ avionics systems and aircraft components using schematics, technical orders, and electronic test equipment, resulting in over \$14 million in cost savings.
- Performed software and hardware updates on various aircraft systems and components to maintain operational readiness and compliance with technical standards.
- Operated and maintained automated test stations to ensure performance and reliability of aircraft electronic components.
- Conducted detailed troubleshooting and fault isolation at the component level.
- Maintained comprehensive maintenance logs and system documentation using databases, ensuring accurate tracking and reporting of repair actions.
- Assisted and trained junior technicians in maintenance workflow, troubleshooting techniques, technical accuracy, and efficient maintenance practices.

Education/Certifications

NPower SkillBridge: Cybersecurity: 10-week, full-time DoD SkillBridge bootcamp focused on preparing transitioning service members for entry-level civilian cybersecurity and IT careers.

Targeted Certification Training:

- CompTIA Security+: Network security fundamentals, threat identification, access controls, and security posture.
- CompTIA Linux+: Command-line operations, essential file management, permissions, and basic system administration.
- Splunk Core Certified User: Log ingestion, search queries, field extraction, and basic security event monitoring.
- Professional Development & Mentorship: Transition coaching, interview preparation, and direct 1-on-1 mentorship with industry professionals to translate military operations into civilian corporate environments.
